

STATOIL TURBWAY GT 46

Turbine

APPLICATIONS

TurbWay GT 46 is recommended for use in modern turbines operating under high temperature conditions, for example ABB GT 10. This type of application will oxidize a conventional turbine oil very fast.

For applications operating at lower temperature, TurbWay 46 is recommended instead.

ADVANTAGES

TurbWay GT 46 has very long endurance under high temperature conditions. This product also performs well under high pressure, making it suitable for use in marine turbine applications.

CHARACTERISTICS

TurbWay GT 46 is a product designed for turbines operating at high temperature. In these applications hotspots of between 300 and

350 °C is not uncommon. This place high demands on the oil's stability against oxidation. TurbWay GT 46 is a turbine oil based on synthetic base oil with additives prolonging the oil's life, especially at high temperature. Tests show that TurbWay GT 46 has very good thermal stability. This product is also suitable for use under high pressure conditions, for example in modern marine turbine applications, where the direction of drive is reversed from time to time. TurbWay GT 46 provides fast air release, counteracting cavitation and thus reducing wear.

TYPICAL INSPECTIONS

CHARACTERISTICS	METHODS	UNITS
Density at 15 °C	ASTM D 4052	kg/m ³

HANDLING AND STORAGE

Avoid skin contact.
Wash thoroughly with soap and water, after skin contact.
Dispose of used oils properly.
Safety data sheet available for professional user on request.

The right to change product specifications is reserved.
